List of Figures

2.1 Example of survival and maternity functions l_a and m_a . 23
2.2 Comparison of $H^\dagger = dr / d \ln p_a$ with $dr / d \ln \bar{\mu}_a$ 24
2.3 Equilibrium number of mutations: additive vs. proportional; theoretical example 30
2.4 Equilibrium number of mutations: additive vs. proportional; example Swedish females 1778-82 31
2.5 Mortality trajectories resulting from mutation accumulation; example Swedish females 1778-82 31
2.6 Proportion of mortality explained by mutation accumulation: additive vs. proportional 33

3.1 The relation between Hamilton's declining indicator of selection pressure and three possible age-patterns of mortality 37
3.2 Different hypothetical mortality trajectories 46

4.1 Size $\xi(a)$ as a function of age a 55
4.2 Determinate growth with Sustenance – optimal size at maturity 65
4.3 Indeterminate growth with Enhancement – optimal trajectories for model variant with nonlinear fertility function 68
4.4 Determinate growth with Senescence – optimal trajectories for model variant with nonlinear fertility function and two state variables 70

5.1 Influence of parameter η_g via investment π on the change in vitality 80
5.2 Energy trajectories 82

5.3 Example Enhancement: $\eta_r = 0.5$ and $\eta_g = 0.5$ 99
5.4 Example Enhancement: $\eta_r = 1$ and $\eta_g = 0.5$ 100
5.5 Example Enhancement: $\eta_r = 0.5$ and $\eta_g = 1$ 100
5.6 Example Sustenance: $\eta_r = 1$ and $\eta_g = 1$ 101
5.7 Example Senescence: $\eta_r = 1$ $\eta_g = 1.5$ 102
5.8 Example Senescence: $\eta_r = 3$ $\eta_g = 1.5$ 102
5.9 Example Senescence (humanesque case): $\eta_r = 3$ $\eta_g = 3$ . . 103
5.10 Example Ensenescence: $\eta_r = 0.5$ $\eta_g = 1.5$ 104
5.11 Example Ensenescence: $\eta_r = 0.5$ $\eta_g = 3$ 105
5.12 Example Enhancement: $\eta_r = 1.5$ $\eta_g = 0.5$ 105
5.13 Example Subsenescence: $\eta_r = 3$ $\eta_g = 0.5$ 106
5.14 Overview of optimal investment strategies across η parameters 107
5.15 Degree of senescence S, in%, across η and mortality parameters 109
5.16 Vitality at maturity across η and mortality parameters . . 111
5.17 Vitality at maturity across η parameters 114
5.18 Vitality at maintenance across η parameters 114
5.19 Vitality at maturity and vitality at maintenance across η parameters 115
5.20 Vitality at maturity and vitality at maintenance across extrinsic mortality c for different values of intrinsic mortality b 116
