

List of Tables

Table 1.1	Regional distribution of foreigners in Germany by federal state, 2005	10
Table 1.2	Employment rates of German and foreign persons by sex, age, and marital status, 1997 – %	11
Table 2.1	Received or aspired school-leaving certificates of immigrants – %	52
Table 2.2	Educational degrees of persons employed in Germany with social security by sex and nationality, 1980 and 1996 – %	54
Table 2.3	Labor-market status by sex and nationality, Germany 1980 and 1996 – %	54
Table 2.4	Unemployment rates of foreigners in Germany by country of origin – %	55
Table 2.5	Total fertility rate in selected countries of origin and in Germany	59
Table 2.6	Unadjusted age-specific fertility rates for “guest-worker” groups and West Germans, 1980 – per 1,000	60
Table 3.1	Overview of the sub-samples	81
Table 3.2	Sample statistics: transition to a first child – person-months (exposures) and first conceptions (occurrences)	87
Table 3.3	Sample statistics: transition to a second child – person-months (exposures) and first conceptions (occurrences)	90
Table 3.4	Sample statistics: transition to a third child – person-months (exposures) and first conceptions (occurrences)	93
Table 3.5	Share of women unmarried at censoring, per country of origin – %	95
Table 3.6	Share of women unmarried at censoring, in respective birth cohort – %	95
Table 3.7	Mean age at first marriage, in respective birth cohort – years	95

Table 3.8	Mean age at first marriage, per country of origin – years	96
Table 3.9	Completed number of children – %	97
Table 3.10	Completed number of children at age 35, per country of origin – %	98
Table 3.11	Mean age at first, second, and third conception, per country of origin – years	99
Table 3.12	Mean age at first, second, and third conception, per birth cohort	99
Table 3.13	Share of childlessness and median age at first-time motherhood by immigrant generation and country of origin	101
Table 3.14	Factors influencing the transition to a first child: immigrant generation and stay duration – relative risks for categorical variables and slope estimates for continuous variables	103
Table 3.15	Factors influencing the transition to a first child: stay duration and marriage duration – relative risks for categorical variables and slope estimates for continuous variables	106
Table 3.16	Factors influencing the transition to a first child: women’s characteristics – relative risks for categorical variables and slope estimates for continuous variables	107
Table 3.17	Factors influencing the transition to a first child: spouse’s characteristics – relative risks for categorical variables and slope estimates for continuous variables	109
Table 3.18	Migrant-specific factors influencing the transition to a first child – relative risks for categorical variables and slope estimates for continuous variables	111
Table 3.19	Share of one-child mothers and median age at second conception	114
Table 3.20	Factors influencing the transition to a second child: immigrant generation and timing of first birth and move – relative risks	117
Table 3.21	Factors influencing the transition to a second child: women’s characteristics – relative risks	119
Table 3.22	Factors influencing the transition to a second child: characteristics of the women and the spouse — relative risks	121
Table 3.23	Factors influencing the transition to a second child: characteristics of immigration background – relative risks	122
Table 3.24	Share of two-child mothers and median age of second child at third conception	124
Table 3.25	Factors influencing the transition to a third child: immigrant generation and timing of previous births and move – relative risks	126

Table 3.26	Factors influencing the transition to a third child: women's characteristics – relative risks	128
Table 3.27	Factors influencing the transition to a third child: spouse's educational attainment – relative risks	130
Table 3.28	Factors influencing the transition to a third child: characteristics of immigration background – relative risks	130
